Small Municipal Residential

SCHEDULE 22 SUMMARY REPORT

# For the period of JANUARY 1, 2020 TO DECEMBER 31, 2020

Prepared by the Ontario Clean Water Agency For The Corporation of the Town of South Bruce Peninsula

### Summary

This report is a summary of water quality and quantity information submitted in accordance with Schedule 22 of Ontario's Drinking Water System Regulation for the reporting period of January 1, 2020 to December 31, 2020 for the Foreman Drinking Water System located in the Town of South Bruce Peninsula. The summary includes the following information:

- Any requirements of the Act and Regulation, Orders or System Approval(s) that the system failed to meet during the reporting period and the measures taken to correct each failure.
- A summary of the quantities and flow rates of water supplied during the reporting period, including monthly averages and maximum daily flows.
- A comparison of the average and monthly maximum daily flows to the approved capacity specified in the System Approval.

### **Issues of Non-Compliance**

An MECP Drinking Water System Inspection was performed on September 4, 2020. On October 13, 2020 the report for this inspection was issued, the Foreman Drinking Water System received an inspection rating of 100%.

The following is a summary of the requirements of the Act, the regulations, the system's approval, drinking water works permit, municipal drinking water license, and any orders applicable to the system that were not met at any time during the period covered by the report; as well as the duration of the failure and the measures that were taken to correct the failure:

Refer to the Section 11 Annual Report for a summary of any Adverse Water Quality Incident(s) which occurred during the reporting period.

### Assessment of Flowrates and Quantity of Water Supplied

The following tables summarize the quantities (Table 1) and flow rates (Table 2) of the water supplied during the period covered by the report, including monthly average and maximum daily flows as well as a comparison of the summary to the rated capacity and flow rates approved in the system's approval, drinking water works permit or municipal drinking water license.

As per Municipal Drinking Water License (MDWL) 094-104 (Issue Number: 3) and the newly issued MDWL 094-104 (Issue Number: 4, expires March 6, 2025), the maximum daily volume of treated water that flows from the treatment subsystem to the distribution system shall not exceed a rated capacity of 165  $m^3$ /day. There is no maximum allowable limit listed in the MDWL for the flowrate of water that flows into a treatment subsystem, however, raw water flowrate has been included in this report (Table 3).

### FOREMAN DRINKING WATER SYSTEM

Small Municipal Residential

### SECTION 11 ANNUAL REPORT

# For the period of JANUARY 1, 2020 TO DECEMBER 31, 2020

Prepared by the Ontario Clean Water Agency For The Town of South Bruce Peninsula Drinking Water System Number: Drinking Water System Name: Drinking Water System Owner: Drinking Water System Category: Reporting Period:

220007711
Foreman Drinking Water System
Town of South Bruce Peninsula
Small Municipal Residential
January 1, 2020 to December 31, 2020

#### **Does the Drinking Water System serve more than 10,000 people?** No.

**Is your annual report available to the public at no charge on a web site on the Internet?** Yes.

### Location where the Summary Report required under O. Reg. 170/03 Schedule 22 will be available for inspection:

Town of South Bruce Peninsula 315 George Street Wiarton, Ontario N0H 2T0 519-534-1400

**Drinking-Water Systems (if any), which receive all of their drinking water from your system:** n/a.

Did you provide a copy of the annual report to all Drinking-Water System owners that are connected to you and to whom you provide all of its drinking water? n/a.

#### How system users are notified that the annual report is available, and is free of charge:

X Public access/notice via the web

X Public access/notice via Government Office

Public access/notice via a newspaper

Public access/notice via Public Request

Public access/notice via a Public Library

Public access/notice via other method:

#### **Description of Drinking Water System:**

The Foreman Drinking Water System is a Class II Water Treatment and Class I Water Distribution System.

The Foreman Water Works Drinking-Water System is supplied by a deep drilled GUDI well. The well pumphouse houses the treatment and control facilities which include:

- Iron/Manganese Removal (potassium permanganate system/greensand filters)
- Cartridge Filter System (to assist with UV disinfection)
- Ultraviolet Disinfection System
- Chlorination System (sodium hypochlorite, pre-chlorination and post chlorination)
- Clearwell/Storage Tank (for achieving CT, the water is also used to backwash the greensand filters)
- Filter Backwash Tank (clarified supernatant discharged by gravity to an existing ditch)
- Hydro pneumatic Tanks (to maintain pressure for highlift discharge and for the greensand filters)
- Diesel generator set
- Programmable logic controller and associated SCADA system (for control of the water treatment plant)

#### List of water treatment chemicals used during the reporting period:

- Sodium Hypochlorite 12%
- Potassium Permanganate

#### Significant expenses were incurred to:

Install required equipment

X Repair required equipment

X Replace required equipment

No significant expenses were incurred

#### **Description of expenses:**

- Schedule 80 repair parts
- Replacement online turbidity analyzer

NOTE: There is no "MAC" for Sodium. The aesthetic objective for sodium in drinking water is 200 mg/L. The local Medical Officer of Health should be notified when the sodium concentration exceeds 20 mg/L so that this information may be communicated to local physicians for their use with patients on sodium restricted diets.

NOTE: Schedule 23, Schedule 24, Sodium and Fluoride are scheduled to be taken every 60 months. The most recent set of Schedule 23 samples were taken in January 2016, the next set of Schedule 23 samples are scheduled for January 2021. The most recent Sodium sample was taken in January 2017, the next scheduled Sodium sample is in January 2022. The most recent Fluoride sample was taken in January 2017, the next scheduled is in January 2022.
